

FOUR IN A SERIES on operating chemical tankers more profitably

▶ 4

Clean MarineLINE®

Quick Turnaround in Port Starts with Fast Cleaning

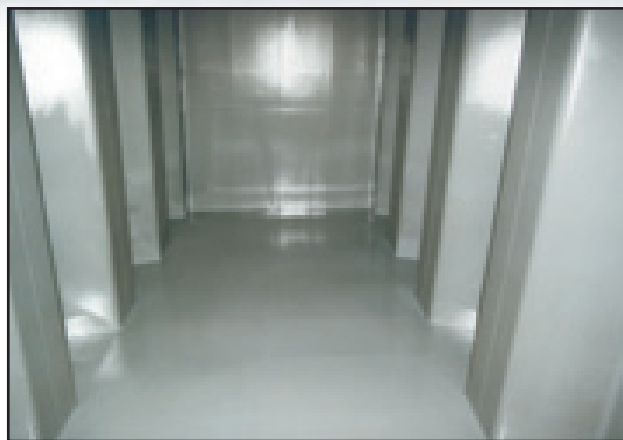

▶ MarineLine® coating squeezes more profit from chemical tankers by ensuring quick cleaning, leading to faster port turnaround and more service hours on the high seas.

Often, tank cargos will change between voyages, so effective tank cleaning is essential. **MarineLine® coating maintains a very slick and hard surface, i.e. an Ra 0.7 rating (very smooth) vs. Ra 1.8 for Phenol Epoxy.** So, the steps of tank washdown, cleaning, drying and desorption move along quickly, with superior tank cleanliness as the ultimate result.

The cross-linked polymer structure of MarineLine® also ensures superior resistance for thousands of chemical cargoes as well as food grades and edible oils, when compared to the limited service and extended cleaning requirements for stainless steel or other coatings.

MarineLine® is the best choice for clean, profitable tanks!

MarineLine® tanks are easily washed and cleaned so they can be quickly readied for the next chemical cargo.
