

ONE IN A SERIES on operating chemical tankers more profitably

1

# Select MarineLINE®

The Safest and Best Cargo Tank Coating Available

▶ MarineLine® tank coating is the undisputed high performance leader in carrying chemical cargoes, CPPs and edible oils on the high seas.

**MarineLine is more than a coating.** It is an entire system of performance, driven by a polymer coating formulation that is forced hot air cured to deliver an extremely chemically resistant, hard, smooth surface capable of carrying the full range of IBC-approved cargoes.

Extensive testing vs. Stainless Steel, Epoxy and Zinc-based coatings has shown repeatedly that MarineLine is the clear solution to answer a range of needs... ensure product purity... clean tanks easily and quickly... and carry the most versatile, aggressive range of cargoes. MarineLine delivers on all fronts with an unparalleled track record of success.

For a higher return on your investment, choose the MarineLine coating system!

*MarineLine® coating employs an extremely dense and highly cross linked polymer structure. Cargoes remain pure from loading until unloading and tanks are easily cleaned.*
